Hybrid Meeting in the framework of the ASviS Festival

This international hybrid meeting, in the framework of the **ASviS Festival**, and with the scientific cooperation of the **Associazione Comunicazione Pubblica**, will consider the importance to regenerate a society of confidence and trust, able to secure the necessary level of resilience of our territories and risk mitigation in the public interest as well as the importance to increase the level of accountability on the basis of commitments made in relation with the SDGs and UN Charter Values.

The meeting will analyse how blockchain can contribute to multi-stakeholders, multi-levels empowerment processes to accelerate the transformation and increase the resilience of Europe (as an European Political Community and the EU), Italy, its Regions and Cities and empowerment of Local Communities and Citizens.

To prepare your participation to the conference you are invited to read the report of Blockchain for Good [Blockchain for Good](#)

Working Language: English and Italian with simultaneous translation
